

The Physics of Heaven #7

A Serial Book Review & Theological Interaction: Part 7

Review of Chapter 6: *Good Vibrations* by Ellyn Davis [1]

Prophets have long recognized that *their words* carry a force or power that is more than just words, but is like an energy that empowers what they prophesy. *Some Christian leaders have also found that they have a “resonance” themselves that helps people move deeper into God.* (Emphasis added, **TPOH**, 53)

—Ellyn Davis

“Good Vibrations”—the chapter’s title is taken from the song written and engineered by Brian Wilson (1942-), sung by the Beach Boys (1966), and which became a #1 song in the United States and other countries. *Rolling Stone* called it the sixth greatest song in rock ‘n roll history. It is considered Wilson’s crowning musical achievement. But inherent with the song, a fact which escaped many of us who were more affected by the sensations of the music, was the message Wilson tried to communicate—a cosmic worldview with a New Age spiritual component. Reflecting the direction the 60s California culture was moving in, Brian Wilson’s life experiences influenced the production of *Good Vibrations*.

The music, Wilson explained, was rooted in childhood memories that included an abusive father (“bad vibrations”) and a clairsentient mother who “had talked to him about vibrations—invisible forces that filled the air.” [2] She explained that dogs did not like certain people because of negative sensations they detected emanating from certain people (auric effect?). As the learning website *Shmoop* informs, “The whole thing terrified Brian; invisible currents floating around the cosmos and sending out messages to people and animals was spooky stuff.” [3] So the song *Good Vibrations* represents his attempt to musically bring “what’s out there down here,” to translate the psychic into the ecstatic. Though scientific evidence remains inconclusive, “Sound vibrations are believed to play a mysterious part in the production of psychic phenomena.” [4]

“Vibrations”: An Ex-Hippie’s Personal Account

During our high school years and beginning in 1969, a friend of mine and I began to use the term “vibrations.” We had picked up the term from the popular culture. It was soon shortened to “vibe” or “vibes.”

Because we had both dabbled in the occult, we believed that “vibrations” were a mystical form of energy that could be spiritually perceived by exercising our Extra-Sensory Perception (E.S.P.). We would challenge each other to confirm the “vibes” we “got” from people, places, even things. We based much of our decision-making upon the vibes we received—a form of divination—and we would act according to whether we

felt “good vibes” or “bad vibes” from a person or in a situation. Our judgment was therefore prone to serious error.

A year later when the hallucinogenic drug culture hit our high school, we began to experience “vibrations” in a whole new way. We could see, hear and feel, even taste or smell, “vibrations” emanating from matter in certain situations. We assumed that meant we were connected to, one with, and pulsating in synchronicity with the universe’s cosmic energy. The music of that era stimulated and intensified feelings of mystical oneness we felt with the cosmos. So imagine our dismay and shock when the euphoria of experiencing drug induced vibrations of “peace” turned ugly when the vibrations turned about to become confrontations with demons and forces of darkness. We found that though often positive, the vibes we felt were in reality untrustworthy, misleading, erroneous and sinister.

By Sarah Leslie

To discover and experience the “invisible forces that filled the air,” Brian Wilson experimented with hallucinatory drugs. One psychedelic experience—whether into “inner” or “outer” space, who knows?—proved ecstatic. (The aftermath of others left him depressed, deranged and almost dysfunctional.) This enamoring experience caused Wilson to experiment with cutting-edge sound technology as he tried to reproduce the sights and sounds of that good “trip” in his music. His studio became his laboratory. He spent countless hours and conducted numbers of experiments to recreate the euphoric sensations of that good psychedelic experience. *Good Vibrations* resulted. About that song Wilson testified that it was, “the summation of my musical vision, a *harmonic convergence* of *imagination* and talent, production values and craft, *songwriting and spirituality*.” [5]

With the song *Good Vibrations*, Brian Wilson had synched the invisible forces of the cosmos with his ecstatic psychedelic experience. By “tripping out” in his mind, he “tuned in” to the universe. As they too were enamored by the feelings the new sound aroused in them, Wilson’s music affected the hearts of millions of listeners. Now a generation later, what was “spooky stuff” to Brian Wilson then, stuff he tried to musically capture and express by combining *visionary* psychedelics with *vibrating* technology, has emerged to become “spiritual and scientific stuff” among apostles and prophets of the New Apostolic Reformation (NAR).

The Physics of Heaven

In her chapter—*Good Vibrations*—Ellyn Davis draws upon the song’s memory to introduce and present “A Basic Science Lesson About Vibrations,” a kind of crash course on sound, light and energy. (TPOH, 54-63) Her introductory and interesting presentation of the science of energy needs no interaction on the part of this reviewer because it is what it is. Much modern technology based upon wave-particle theory—medical and otherwise—serves as an immense help to humanity’s health and convenience. How many of us use cell phones, computers, microwave ovens or have had X-rays or MRIs taken to diagnose illnesses, and much more? Technology based upon wave or particle observation, calculation and application seems to be

everywhere!

It can be argued that these benefits and conveniences can be derived from nature because God originally powered it up. “Let there be light” God said, “and there was light” records Moses (Genesis 1:3). Energy derives from God and therefore existentially and ontologically points observers and users to Him, or at least it should. This is not up for debate among believers (Romans 1:20; Psalm 19:1-6). But this observation does not therefore endow light—the thing in itself which secular scientists believe is the essence of the universe—to be divine, though there resides in the human heart the temptation to spiritualize nature and make “It” divine (i.e., pantheism). Energy does not explain God. Only God explains God. Even though God is light (1 John 1:5), the light we experience is separate from Him because He created it separate from Himself (Genesis 1:3-4). Though throughout history the temptation has existed to deify and worship light, light itself is not God. However, some quantum spiritualists would have it otherwise.

Quantum Bible Verse?

To biblically validate that some Christian leaders resonate with the force of nature by which they lead others deeper into God, author Davis quotes Romans 1, verse 20, which reads:

For since the creation of the world God’s [NASB, His] invisible attributes—his eternal **power** and divine nature—have been clearly seen, being understood from [NASB, through] what has been made. (Emphasis added, **TPOH**, 54)

Based upon this verse, she asks, “What if there are ‘good vibrations’ that God has imbedded into everything He created and we just need to be open to experiencing them?” (**TPOH**, 54) To question her question, it should be asked: Does Paul’s statement endorse, even theoretically, linking Christian experience to nature’s quantum energy? For a number of reasons the answer is, “No.”

First, the obvious subject of the paragraph concerns the evidence for and knowledge of God in man revealed by the “wrath of God . . . against all ungodliness and unrighteousness of men who suppress the truth in unrighteousness” (Romans 1:18). *Second*, what makes evident the existence of God and human accountability to Him are “His invisible attributes, His eternal power and divine nature” as “clearly seen [and] understood through what has been made” by God (Romans 1:20). So the power of God as revealed in the working of the universe makes any observer accountable to God (including the most renowned physicists). *Third*, though God’s eternal power and divine nature are evidenced in the universe’s mechanical working, the majority of humankind suppresses the inference that God is. Instead, they develop natural or spiritual explanations (like evolution and pantheism) to explain creation; and this to dismiss any idea of personal accountability to the Creator who “just might” hold them responsible and accountable for their unrighteousness, which sin contributes both to their misery and those around them. And *fourth*, rejecting the obvious places God-deniers between a “Rock” and “a hard place.” The Rock: “Is there any God besides Me, or is there any other Rock?” (Isaiah 44:8b). The hard place: “The fool has said in his heart, ‘No God!’” (Psalm 14:1). Regardless of the quandary they find themselves in and choosing to remain oblivious to the obvious, God

deniers choose to exist in the “hard place” where their souls find no rest. But because their hearts will not let them deny, they must believe in something, even if it’s anything, or everything. So they choose to worship the creature(s) rather than the Creator. Of this choice Paul states that, “Professing themselves to be wise, they became fools” (Romans 1:22). Incredibly, humans exchange worship of the “incorruptible God” to worship corruptible nature—birds, animals, bugs and above all else, even themselves (Romans 1:23). As a T-shirt messages it, “I was an atheist until I found out ‘I’ was God!”

The point: While Romans 1, verse 20 has everything to do with natural or general revelation (i.e., there’s enough evidence in nature to make every person accountable to God), it has nothing to say about tapping into nature’s vibrations to experience power. [6] This verse Davis cites to support her theory that vibrations exist by which believers can power-up their ministry is misguided. The verse concerns revelation not resonations. One endorser of *The Physics of Heaven*, himself a prominent quantum spiritualist, claims that there’s an “amazing convergence between the insights of quantum physics and biblical revelation!” (Phil Mason, **TPOH**, Endorsements) Though this may be true as regards God’s revelation of Himself in nature, it becomes a quantum leap to believe that Christians can get into super-nature by tapping into the energies in that realm. Such a quantum leap Scripture does not support. But new prophets take the leap anyway.

Quantum Prophecy: the New Prophets

Taking her cue from the vibrations within the universe (something she ably introduces and explains), Ellyn Davis hitchhikes on this force (input source) to, in an algorithmic, mechanistic and pantheistic way, assign supernatural power to oracles spoken by mediators and mediatrixes, modern prophets and prophetesses (output devices). Though technically all speech vibrates (theoretically *ad infinitum*), Davis tells readers that the speech of contemporary prophets especially does so. She informs:

Prophets have long recognized that *their words* carry a force or power that is more than just the words, but is like an “energy” that empowers what they prophesy. (Emphasis added, **TPOH**, 53)

In the above statement Davis makes a sort of Freudian slip. Note her assertion: “Prophets have long recognized that *their words*” pack power. Based upon her assertion, questions need to be asked, the ministry of the biblical prophets understood, and the implication of her statement addressed.

Questions

Where does the force come from? Does the residing energy in the universe somehow amp-up their words in a megaphonic way? Do their words exceptionally vibrate because as prophets, they speak them? Or do they pack power because the words are God’s? To understand the power source of the true prophetic word of God, we look at the Old Testament prophets.

The Biblical Prophets Understood: the Lord’s Servants

The designation “prophet” denotes an individual who speaks for God. The Hebrew word *nabiy*

means “spokesman.” The New Testament Greek word *prophetes* means “to speak for.” Though the analogy does not fit on all points, the prophet’s function might be compared with that of the President’s Press Secretary. At news conferences held in the White House, the secretary briefs the press corps regarding issues of the President’s administration. The Press Secretary speaks, sometimes *misleadingly*, for the President. In similar way, the divinely inspired prophets of the Bible spoke, *not misleadingly*, for God to the nation of Israel and later in the early church. But in their communications, Scripture is careful to point out that the biblical prophets did not speak “their” word, but the Lord’s.

God’s Word, not theirs

Throughout the prophetic Old Testament writings there’s a recurrent designation, with slight variation, for what the prophets spoke. Either the Lord, in speaking to the prophets, or the prophets, in speaking to the people, designated what they spoke as the Lord’s Word, not theirs. The designation appears like this:

- “My word”—Isaiah 55:11; Jeremiah 1:12; 23:28; Ezekiel 14:9
- “My words”—Isaiah 59:21; Jeremiah 1:9; 23:22; Ezekiel 3:4
- “the word of the Lord”—Isaiah 1:10; Jeremiah 2:11; Ezekiel 1:3
- “His holy words”—Jeremiah 23:9

As reflected in this Old Testament sampling and unlike the modern-day prophets referred to by Davis, the Lord’s prophets are careful to designate that they did not originate or own the words they spoke. Rather, they spoke “the word of [from or belonging to] the Lord.” As Dr. René Pache (1904-1979) summarized:

The prophets, in a peculiarly exact way, identified their . . . message with the word of God: ‘Hear the word of Jehovah. The word of Jehovah was addressed to me in these words. The mouth of Jehovah hath spoken. Jehovah spake unto me. Thus hath Jehovah said unto me,’ etc. We find such expressions in Isaiah 120 times, Jeremiah 430 times, Ezekiel 329 times, Amos 53 times, Haggai 27 times (in 38 verses) and Zechariah 53 times. [7]

God’s Power, not theirs

Furthermore, the Lord told Jeremiah that the power of the Word spoken by the prophet was His. “Is not My word like fire?’ declares the Lord, ‘and like a hammer which shatters a rock?’” (Jeremiah 23:29). By stating that these modern-day prophets have long recognized that their words carry force, does the author thereby betray that these self-proclaimed prophets really are speaking words which are, “Not from the mouth of the Lord”? (Jeremiah 23:16) After all, Davis specifically states the words of these prophets are *theirs*.

Implication: New Apostles, New Prophets, New Authority

In that the new prophets recognize the resonating power of their words (Remember, the words are *theirs*.), what does this imply as regards the absolute authority of Scripture? Some of these prophets claim that their word is on a par with with Holy Scripture (In other words, there is no

real separation between what they speak and what stands written.). One of them, perhaps “speaking for” others, has stated: “The same biblical principles about the attitude that we are to have toward the written word, the *logos*, should be applied to the *rhema* that is declared prophetically.” [8] The new prophets and apostles therefore believe, given their authority, that the innovative word they speak can either supplement, even supersede, the written Word of Scripture. After all they recognize their words contain a force or power that goes beyond normal speech.

Quantum “Resonating”: The New Prophets

Regarding science’s discovery of, research into and experimenting with the universe’s quantum reality over the last few generations, Davis observes that, “In recent years, God has been opening the eyes of some of His people to the mysteries of sound, color and light, and vibrations and energy.” (TPOH, 53) [Ed. Note: The esoteric exclusivity denoted by the designation *some of His people*, suggesting that average Christians like me and perhaps most of you, just don’t get it.] She also has previously affirmed that, “other prophets are finding that sound, color, and light have healing frequencies to them.” (TPOH, 54) So the resident energy in the quantum world causes these new prophet-apostles to theorize that they can plug in to the surrounding energy to amp up their “spirituality” and “ministry.” In other words, by tuning in to the frequencies of the surrounding forces, “good vibrations” can become “god vibrations.” “What if there are ‘good vibrations’ that God has imbedded into everything He created” Davis asks, “and we just need to be open to experiencing them.” (TPOH, 54, 55) Though no machine has been invented to capture the universe’s perpetual motion and put it to constructive use, many Charismatic Christians are coming to believe that they can tap into and minister in the power of these powers. As Davis writes, “we just need to be open to experiencing them.” (TPOH, 54, 55)

So let “experience” be the guide. By experience these new prophets are, according to Davis, turned on with because they are tuned in to nature’s vibrations. Not only have these new prophets discovered “that sound, color, and light have healing frequencies to them,” but also “that they have a ‘resonance’ themselves that helps people move deeper into God.” [9] (TPOH, 53) Christian leaders (likely referring to NAR apostles and prophets) are able to channel the universe’s quantum energy to heal and help others move deeper into God. Note the claim: Some Christian leaders “have a ‘resonance’ themselves.” From this statement questions arise. First, do some Christian leaders possess *a resonance themselves*? And second, can this resonance move people deeper into God?

If this is the case, it must be asked, whatever happened to the ministry of the Holy Spirit? Do people move deeper into God by auric resonations emanating from certain Christian leaders? Or, do Christians move deeper into God by His revelation of Himself through Christ in Scripture as born witness to by the person and power of the Holy Spirit? The biblical answer is obvious.

By His manifold workings (i.e., convicting, regeneration, baptism, sealing, filling, etc.), the Third Person of the Holy Trinity first attracts people to Christ (John 16:8), then escorts them into union with Christ (Acts 1:5; Colossians 1:27), and later over time, moves them into deeper communion with Christ (Galatians 5:16). About moving deeper into God, Paul wrote to the Corinthians,

Yet we do speak *wisdom* among those who are mature; a *wisdom*, however, not of this age nor of the rulers of this age, who are passing away; but we speak *God's wisdom* in a mystery, *the hidden wisdom* which God predestined before the ages to our glory; the *wisdom* which none of the rulers of this age has understood; for if they had understood it they would not have crucified the Lord of glory; but just as it is written,

Things which eye has not seen and ear has not heard,

And which have not entered the heart of man,

All that God has prepared for those who love Him.

For to us God revealed them through the Spirit [Things which eye has not seen and ear has not heard]; for the Spirit searches all things [Things . . . which have not entered the heart of man], even **the depths of God**. For who among men knows the thoughts of a man except the spirit of the man which is in him? Even so *the thoughts of God no one knows except the Spirit of God*. Now we have received, not the spirit of the world, but the Spirit who is from God, so that we may know the things freely given to us by God. Emphasis added, 1 Corinthians 2:6-12

Based upon this passage of Scripture, I ask one question: Who moves people “deeper into God”? The answer is not a cadre of Christian leaders who carry about a quantum “resonance” within them—whatever that is—but the Holy Spirit! The Holy Spirit leads all believers in to the “deeper life,” and furthermore through the Holy Spirit every believer is a “partaker of the divine nature” (2 Peter 1:4). **[10]** Though we may cultivate life in the Spirit, we neither originate it nor activate it!

The Holy Spirit: Person or Resonance?

Man is God Theology

By proposing that people lead other people deeper into God raises some genuine theological concerns. First, claiming that certain Christian leaders possess “resonance themselves” infers that “manifest sons of God” possess power to influence other persons. So in believing they possess such “resonating,” it becomes a small step for them to assert themselves to be little gods, and in doing so, they in effect become usurpers of Jesus.

Heresy

In addition to the Father and the Son, the Holy Spirit is the powerful Third Person within the triune Godhead (Genesis 1:2; Matthew 12:28, 31-32; 28:19; Acts 1:8). To claim that certain leaders possess “resonance themselves” asserts independence from the Holy Spirit. After all, they have “resonance themselves.” Such “resonance” teaching depersonalizes the Holy Spirit into raw power (“The Force?”) thereby contradicting the biblical teaching on the Trinity; that God is not only eternal, but personal. Two anti-Trinitarian heresies, Arianism (4th Century) and Socinianism (16th Century), emphasized the power of the divine spirit to the denial of the Spirit's personality. For example,

Arius regarded the Spirit not only as a creature, but as created by Christ, *ktisma ktismatos*, the creature of a creature. Sometime afterward, his [ed., the Spirit's] personality was wholly denied by the Arians, and he [the Holy Spirit] was considered as *the exerted energy of God.* [11]

As a rationalist movement after the Reformation, Socinianism, which led to the emergence of modern day Unitarianism, also viewed the Spirit of God to be the energy of God. Theologian W. G. T. Shedd (1820-1894) informed that, "Socinians deny the distinct personality of the Holy Spirit; they concede eternity, because they regard the Spirit as *the influence or effluence of the eternal God.*" [12]

With this quantum emphasis upon "resonating" Christian leaders, it becomes interesting to see how faith in the distinct person, power and ministry of the Holy Spirit is being reduced, even ignored. The irony of it all is that this is happening within a movement that owes its origin to the Pentecostalism which once-upon-a-time (at the turn of the last century) placed a premium upon the Holy Spirit's ministry (i.e., the baptism of the Holy Spirit authenticated by speaking in tongues, and a revival of the spiritual gifts). Thus, these new apostles and prophets reveal themselves to be apostates from their Pentecostal heritage.

Quantum Rapturing: the New Prophets

Heavenly tourism (going to Heaven and coming back to earth again), whether on the part of children or adults, has become a publicized experience among Charismatic Christians, and this despite Jesus having told the Jews, "where I am going, you cannot come" (John 8:21), and His promise to His disciples, "If I go and prepare a place for you, *I will come again and receive you to Myself*, that where I am, there you may be also (Emphasis added, John 14:3). Nevertheless, Ellyn Davis states regarding her co-authoress of *The Physics of Heaven*,

Judy Franklin has found that people who have a hard time "going to heaven" by themselves can do more easily do it if they are around her; so she carries some sort of energy that helps them. (TPOH, 53)

In light of Jesus being the arbiter of when and how people get and go to Heaven, this mediator claim is outlandish (i.e., that like Mary, she can help people get to heaven). The idea that for reason of being exposed to Judy Franklin's auric energy, people can more easily take an inter-dimensional trip to Heaven (and presumably back again) imposes upon, even usurps, the promise, prerogative and the ministry which belongs to Jesus Christ alone; that is, if His incarnation, death, resurrection, ascension and promised return mean anything. This teaching suggests that for traveling to Heaven temporarily, certain Christians might need Judy more than Jesus.

Quantum Gifting: the New Prophets

Further, Davis claims a "spiritual-gift aura" surrounds Larry Randolph, a NAR prophet. Of his teaching, she explains—again usurping the ministry of the Spirit—that Randolph "has always taught that proximity to someone who already operates in a particular gifting is crucial when

learning to operate in that spiritual gift.” (TPOH, 53-54) This claim is asserted despite the Apostle Paul’s teaching that, “there are varieties of gifts, but the same Spirit” (1 Corinthians 12:4). Then after listing a number of spiritual gifts, Paul goes on to say, “But one and the same Spirit works all these things, distributing to each one individually just as He wills” (1 Corinthians 12:11). Spiritual gifts are given according to the will of the Holy Spirit. They are “gifts.” Believers cannot buy them. They cannot earn them. We can only receive them, and their reception and refinement comes not by human influence, but by the sovereign Spirit’s endowment and discipleship.

Conclusion

Natural Theology

In her chapter “Good Vibrations,” Ellyn Davis asks, “Could it be that there are things that we can better understand about God through things He has made such as vibrations and frequencies?” (TPOH, 54, *Sidebar*, 55) This question is premised upon natural theology; that humans can discover God via the inferences that can be made about Him from nature. The ancient Hebrew writings, Apostle Paul, Church Fathers, theologians, and even some scientists would answer her question in the affirmative. There is a sense that, “The heavens are telling of the glory of God; And their expanse is declaring the work of His hands” (Psalm 19:1).

Natural theology, that is, insights about God based upon observing the order and functioning of the natural universe, can but does not necessarily—as Romans 1:18-23 teaches—lead observers to believe that a highest power originated and rules the natural order of things. But what natural theology cannot do, in and by itself, is prove the existence of the Christian God, even though Scripture declares the Lord Jesus Christ to be the Originator of it all (John 1:3; Colossians 1:16; Hebrews 1:2). Any faith in Jesus depends upon special divine revelation; that is, the historical witness to Jesus’ exceptional incarnation, vicarious death and atonement for our sin, victorious physical/material resurrection from the dead, and personal return to this planet in the future, all of which the Holy Scriptures inspired by the Holy Spirit bear witness to (John 15:26; 2 Peter 1:19-21). While natural theology can lead to the proposition *God is*, that same theology does not necessitate the proposition *Jesus is God*. To that end, special revelation must have been given and then accepted. Absent the intervention of special revelation in Christ and Scripture in history, inferences from natural theology become dead end streets in the human quest to know and experience God. **[13]**

So it must be concluded that Ellyn Davis’ theory that connecting with the nature’s vibrations will somehow empower Christians to live more supernaturally is a wishful fiction, even spiritually dangerous because the Apostle Paul calls demons “rulers (*archas*) . . . powers (*exousias*) . . . world forces (*kosmokratias*) of this darkness . . . spiritual forces (*pneumatika*) of wickedness” (Ephesians 6:12). Upon reading the Apostle’s description of the powers belonging to demons, believers must be impressed that the new quantum-power spirituality being peddled by the new prophets and prophetesses might well be a seductive “scheme of the devil” (Ephesians 6:11; Compare Colossians 2:8). **[14]** Connect the dots: quantum light, colors, sounds, energy, vibrations . . . the devil’s powers, forces, spiritualities. One point is certain, being rooted in nature, quantum-nature spirituality does not communicate the Gospel (1 Corinthians 15:3-4).

April Fools!

At the beginning of the month, a number of websites issued their April fools jokes. The website of CERN (i.e., European Council for Energy Research) showed pictures of scientists claiming to have discovered the Force (i.e., the mysterious energy field used by the Jedi in Star Wars) and using it in everyday life—driverless pizza delivery, thought-powered web searching, etc. It was reported about CERN's claim on its website,

“The Force is what gives a particle physicist his powers,” said Cern scientist Ben Kenobi of the University of Mos Eisley, Tatooine in a press release. Many scientists at the centre were already using The Force, said the release, to communicate over long distances, influence minds and for “lifting heavy things out of swamps”. **[15]**

Of course, the whole thing was a spoof. It's interesting that what is “spoof” to CERN scientists (an April Fools Day gag) has become spirituality to modern day prophets. Need any more comparison or comment be made, other than to say Satan is a master masquerader?
